#DM4 / DM8 DMSO LIQUID – Medicinal Grade

DMSO has many uses, but it is known mostly as a natural pain killer and transporter. First synthesized in 1866, DMSO is a sulfur-containing organic compound that is derived from MSM, and can be used internally or externally.

DMSO can aid injuries such as sprained ankles, sore muscles and joints, and even fractures. The process starts when DMSO enters the bloodstream by osmosis through capillary walls. Then, DMSO is distributed throughout the

throughout the

DMSO has also been found to be a great product for Reflex Sympathetic dystrophy (RSD). A 2001 clinical study conducted in the Netherlands compared DMSO with NAC (n-acetyl-l-cysteine) for the treatment of Complex Regional Pain Syndrome (CRPS). The study was randomized, double-dummy controlled, and double-blind. For 17 weeks, 146 patients received treatment, with the option to continue or switch medication up to one year after beginning treatment. The study found that DMSO 50% showed more overall improvement, especially for patients with lower extremity CRPS and warm CRPS I.

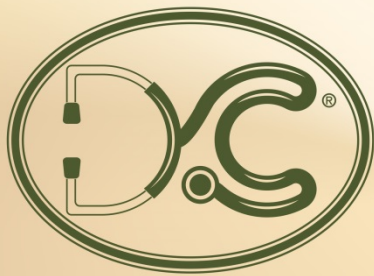

DMSO also promotes immune system activity and can help in bodily detoxification. Historically, DMSO has also helped conditions such as neurological damage, arthritis, back problems, keloids, acne, burns, musculoskeletal problems, sinusitis, headaches, skin ulcers, herpes, and cataracts.

Topical application has been associated with redness and inflammation of skin, and a garlic-like taste and odor on the breath have been reported.

DMSO QUICK GUIDE:

- DMSO is a very temperature sensitive product.
- Liquid DMSO can and will crystallize in a cold environment. If this occurs, place or keep the DMSO bottle in a warm (20°C+) place and within a few hours it will go back to liquid form. For faster result, place the bottle in a clean zip lock bag, seal it, and place it in warm water. Under any circumstances, do not microwave it! Crystallization will not change the quality or the effectiveness of the product.

- When using DMSO, always make sure to have clean hands and skin. DMSO is a powerful pain reliever and transporter. If you have dirt or anything else on your hand(s) and /or skin, DMSO will take it down to your deep tissue, as far as to the seventh layer into the dermis, and can cause irritation or discomfort.
- Do not cover area(s) where DMSO is applied; it should be allowed to air dry.
- When starting a DMSO regimen, we recommend starting with a small amount and gradually increasing the dosage, as the product is very strong. Individual reactions may vary. If the DMSO is still too strong, we recommend mixing it with other topical products at a 50:50 ratio to reduce the product strength. We recommend our Recovery H Cream or Sweet Relief (MSM) Cream. Doctor's Choice[®] cannot guarantee equal results and quality using other brands to reduce the strength of the DMSO.
- If using DMSO after shower, it is recommended to wait 30 minutes to an hour, as the pores on the body are wide open and too much DMSO can be absorbed by the body. Causing irritation or discomfort.
- DMSO has a strong sulfur and garlic odor. When applied garlic taste may be tasted in your mouth. This is a normal occurrence
- DMSO products are packaged in glass containers, which eliminates all possibilities of chemical leeching

Recommended Dosage: Adults apply to affected area as needed, best used sparingly, or as directed by your health care practitioner.

Recommended Use: Helps to reduce pain associated with Reflex Sympathetic dystrophy (RSD). Used in Herbal Medicine to help relieve minor burns including sunburn. Assists healing of minor wounds such as cuts and burns, and minor skin irritations.

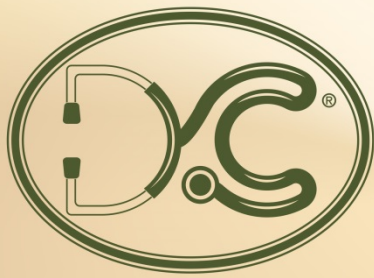

Cautions/Warnings: Consult a health care practitioner prior to use if you are pregnant or breastfeeding. Consult a health care practitioner if symptoms persist or worsen. If skin irritation develops, discontinue use. If irritation persists, consult a health care practitioner. Consult a health care practitioner prior to use if you have severe liver or kidney disease. Avoid contact with eyes and mucous membranes; if this happens, rinse thoroughly with water. For external use only.

Ingredients: 118ml/250ml

- DMSO (dymethyl suffoxide 99.9%).....90%

Non medicinal ingredient: purified water
